

# HVACScan®

## Benefits

*Increase new preventative maintenance contracts and retain more existing customers with HVACScan® from BuildingReports®, the robust facility HVAC-R asset management solution from the leader in fire and life safety compliance reporting.*

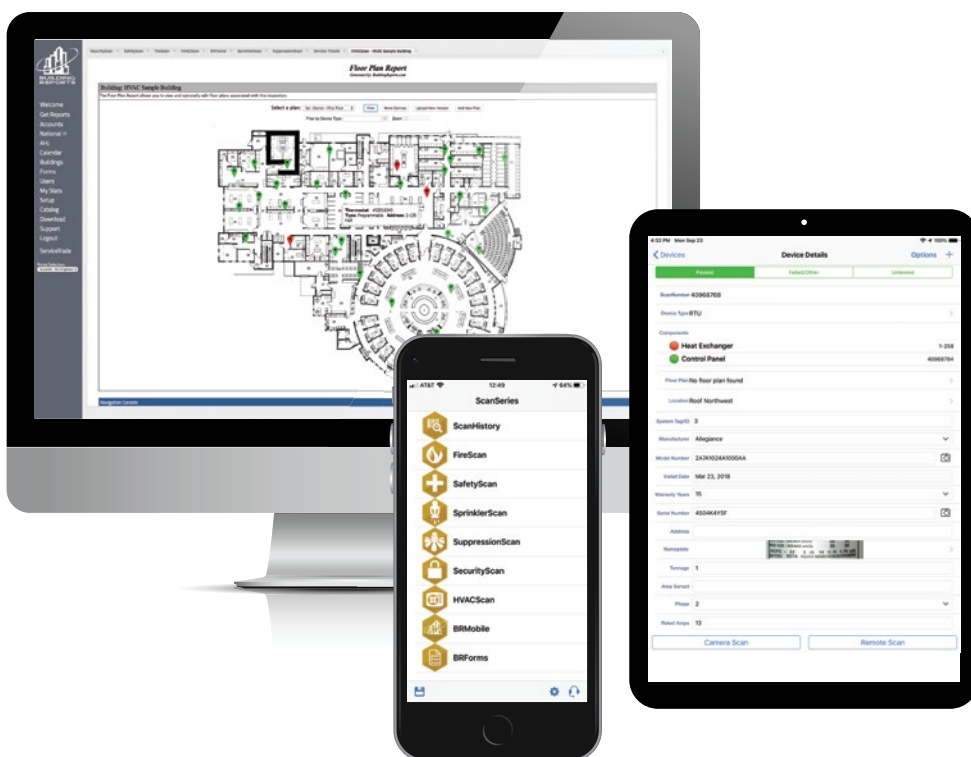

You likely already employ technology for field service management, inventory management, project management, job costing, and much more. While these solutions help you provide efficient and reliable service delivery, they lack direct, tangible value to customers mired in paper reporting who lack visibility into their HVAC-R systems status.

Introducing HVACScan from BuildingReports, a mobile service documentation application and web-based inspection reporting solution that provides the business intelligence and valuable insight other solutions can't. Through a simple barcoding point-and-scan process, technicians can quickly and easily provide verifiable electronic documentation and inventory tracking for HVAC-R systems and devices during preventative maintenance service.

- Give customers access to robust HVAC-R asset management reporting anytime, anywhere they have access to the internet
- Track recalls and warranties and gain valuable insight into your customers' operations, allowing for proactive proposals for new projects and revenue
- Address and document compliance-related issues more efficiently and effectively
- View, download and email complete preventative maintenance documentation and service reports with just a click
- Verify all technician service with time and date stamps, with a detailed historical log of service delivery by device over time

### The BuildingReports Advantage

Now you can maximize efficiency, save money and reduce risk by managing critical inspection data with BuildingReports' detailed online reports. BuildingReports puts information at your fingertips. Just login to your secure account and review your report, authorize repairs, manage inventory and view inspections. Your information is accessible whenever and wherever you need it and immediately available to print for binder insertion when required.

HVACScan can also help your technicians streamline and expedite one-off service calls during peak season, while eliminating manual paper reporting year-round. With features like an interactive floor plan system for location and device tracking, warranty tracking and recall alerts, and open API integration with your existing technology stack, your techs can perform more service calls while identifying opportunities for additional products and services.

HVACScan also allows enhanced operational oversight. Because every device scanned includes a time and date stamp, a detailed record is available of each technician's progress throughout each facility, each day. This allows field service management to measure key performance indicators for each field technician, including heat maps and time-lapsed visualizations of their progress for each maintenance engagement when leveraging the floor plan feature.

**HVACScan®** from BuildingReports closes the technology loop on delivering best-in-class preventative maintenance reporting and value-added, comprehensive customer asset management.
