

On-Demand Digital Intelligence

BuildingReports offers a convenient and efficient way to access building inspection reports history and device history with a simple scan from a mobile device.

SCANHISTORY™

ScanHistory is a feature within the ScanSeries application that allows an authorized user to access a complete inspection and service history of that device simply by scanning the barcode. Quickly gain access to important information, such as installation date, warranty and recall information, or the proper location for devices that have been moved or misplaced.

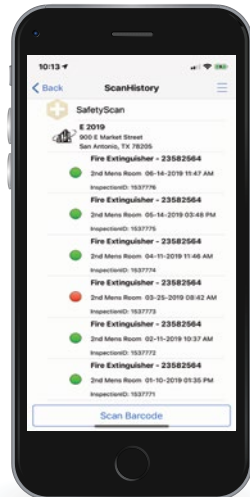

This convenient tool is another value-added benefit for facility management professionals and AHJs, including healthcare auditors who routinely need access to device history. Rather than digging through multiple reports to gather historical device information, ScanHistory provides a complete story of the device activity over time.

LIVEARCHIVE®

BuildingReports has created LiveArchive, a service that provides instant electronic access to your building's inspection reports. LiveArchive is a sticker with a unique QR code that is placed near or in a building's control panel, as well as in other areas such as utility rooms or wherever your fire and life safety equipment is stored. LiveArchive QR codes can be placed in multiple locations within a facility providing users with a variety of access points to compliance documentation, creating redundancy in the event that equipment with a QR code is moved or replaced.

Unlike paper logbooks, LiveArchive provides immediate and secure access to critical reports and historical data on the following:

- Fire and life safety inspections
- Fire and life safety service history
- As-built drawings and interactive floorplans
- Emergency plans
- HVAC and security system assets
- Provide access to BRForms® reports
(ScanSeries® not required)

HOW IT WORKS

Scan a barcode with ScanHistory

Using the ScanHistory app in ScanSeries, authorized users can quickly and conveniently access the complete history of device inspections and services performed as logged with BuildingReports. Conveniently check device status, repair history, installation date, or verify recall and warranty status on-demand.

Scan a LiveArchive label

Using the QR code app on your mobile device scan the label. Once the code has been read, the LiveArchive opens. You may be asked to login at this point.

View reports

The types of reports that are ready for viewing via LiveArchive will be displayed. Simply tap or click on an entry to view the latest report.

The most trusted name in
compliance reporting
